# WHY IS SIGNPOSTS TRAINING NEEDED?

Signposts is an evidence based course designed to equip parents and caregivers with skills and strategies to understand their child's difficult behavior, develop specific strategies to better manage them effectively and prevent further development of behavioral concerns.

Signposts was jointly developed in 1998 by the Parenting Research Centre (PRC) and RMIT University staff in conjunction with parents. From inception the programme has benefited 3,000 families in Australia & Singapore.

The programme, available to families and caregivers Singapore, will now be delivered to parents in Malaysia, through a partnership with Oasis Place Sdn Bhd and KK Women's and Children's Hospital. This training will give the tools and strategies to support parents and carers to promote positive behavior and new skills in their child.
